

4I72 PC/104-PLUS --> QUAD MINI PCI III ADAPTER

- PC/104-PCI to Quad Mini PCI
- 2 Year warranty
- Local 3.3V regulator for Mini PCI
- Occupies only 1 PC/104-PCI SLOT
- 4I72 can use slots 0-3
- Universal (5V or 3.3V BUS)
- Connectors for LED status signals
- Supports routing of second interrupt
- Made in USA – Local support

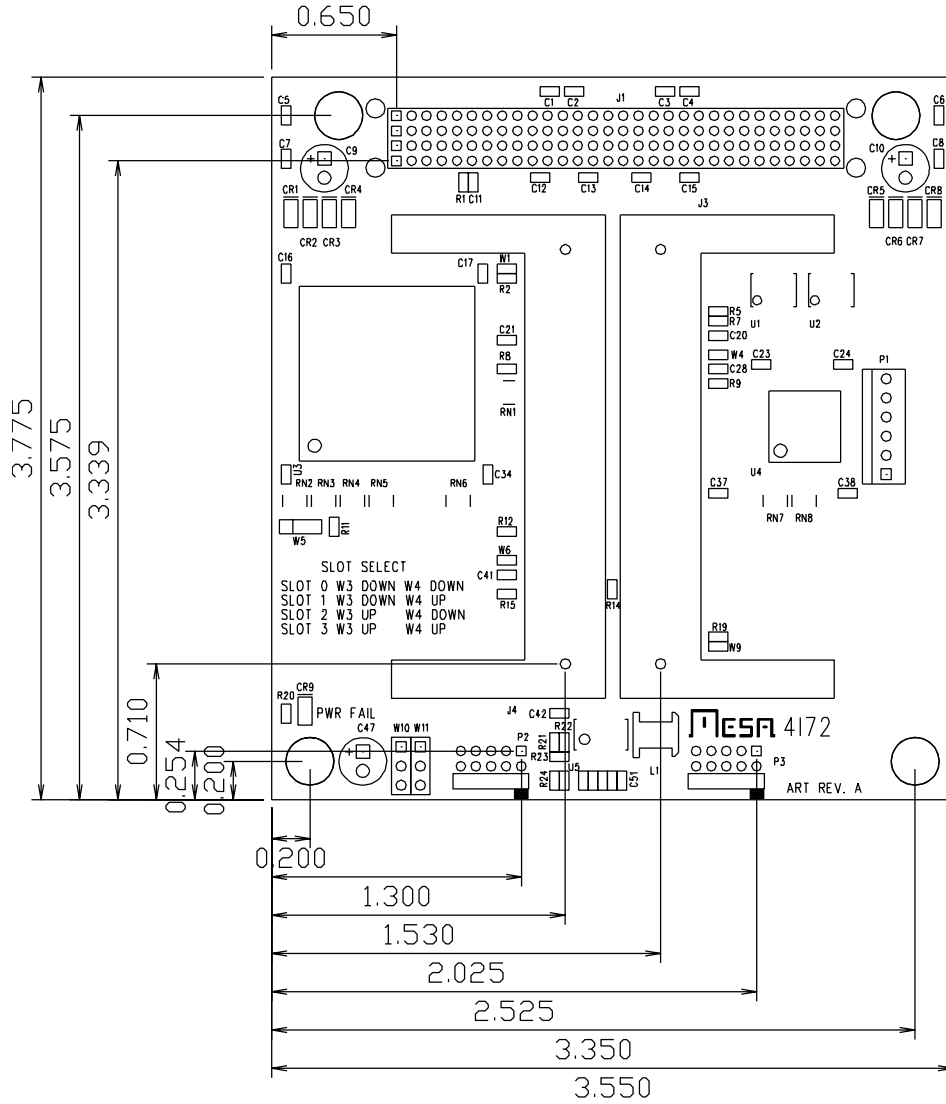

The 4I72 is a dual type III Mini-PCI adapter for the PC/104-PCI bus. The 4I67 allows use of 4 Mini-PCI cards like IEEE 802.11 wireless LAN cards in a PC/104-PCI system.

The 4I67 uses a PCI bus bridge so that only one PC/104-PCI 'slot' is required. The PCI bridge also isolates the Mini-PCI cards from the system, allowing MiniPCI cards to be used in systems with 5V busses.

On card jumpers are used to select which PC104-PCI slot the 4I72 occupies. Status LEDs are provided for the Mini-PCI slots, plus connectors are available for external LEDs. A local switching regulator supplies 3.3V power to the Mini-PCI slots, allowing operation in single 5V powered systems.
